### REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: No prior art has been found or presented that either teaches or fairly suggests the production of UV transparent pressure-sensitive adhesives, having a UV transparency at 300 nm of more than 95%, wherein an acrylic copolymer composition is formed having a weight average molecular weight of less than 300,000 g/mol by polymerizing a monomer mixture comprising (a1) 75 to 99% by weight of specific acrylic esters and/or methacrylic esters; (a2) 0 to 10% by weight acrylic acid and/or methacrylic acid, (a3) 0.2 to 5% by weight of olefinically unsaturated monomers which contain at least one UV-crosslinking functional group per monomer and (a4) 0 to 20% by weight of olefinically unsaturated monomers which are different than the olefinically unsaturated monomers (a3) and which contain at least one functional group per monomer. Nothing in the reference to Husemann et al teaches a specific range of from 2 to 20% by weight of a silicate filler having a maximum particle diameter of 50 nm, which is mixed into the composition either before or after polymerization of the monomer mixture. The reference shows filler materials at column 13 (lines 61-67), but provides neither guidance nor suggestion as to the particle size or compositional limitation, as recited. Nothing in Husemann et al teaches or suggests that anything about molecular weight or silicate filler characteristics could enable such a high UV transparency. The rejection of the claims over Husemann et al (US 6,958,186) is expressly withdrawn. Since there are no other outstanding issues with regard to the clarity or enablement of the claims, these claims are deemed to contain allowable subject matter.
